

AI Server

I actually don't have a lot of advice on this because there just isn't a lot known about optimal specs for hosting AI. I'm lumping in other high end servers into this category because high end servers are actually fairly niche. Personally, the best I could do is try to write up a basic build guide for a gaming PC and hope it is somehow relevant to what your server actually needs.

So, I'm just going to link this one Reddit post and hope that's helpful. (Can't find link ??? It was either on [SelfHosted](#) or [LocalLLaMA](#) or [Homelab](#))
